Re: Response to Information Request
Downeast Energy Bulk Oil Storage Facility
Springvale, Maine
EPA Docket #09-308-019
St.Germain File No.: 2726.2

Dear Mr. Sherrin:

St.Germain & Associates, Inc. (St.Germain), on behalf of Downeast Energy, is providing you with this response to the Information Request letter from Joel Blumstein, dated December 30, 2008.

The following responses are numbered the same as provided in EPA's December 30th letter:

Page 1, bullet 1. An initial assessment of surface topography in the vicinity of the tanks (see enclosed Surface Topography Plan) by St.Germain & Associates, Inc. on January 8, 2009 shows that the large vertical tanks and loading racks are located fully within the secondary containment area, and therefore any oil discharges in the vicinity of the tanks would not migrate beyond the secondary containment.

Page 1, bullet 2. The July 2005 SPCC Plan has been revised to reflect the most current and appropriate security measures maintained at the facility. A copy of the revised SPCC Plan (Revision 1, January 2009) is enclosed.

Page 1, bullet 3. The July 2005 SPCC Plan has been revised to reflect the repair and activation of the tank electronic overfill alarms by May 15, 2009.

Page 2, bullet 4. The July 2005 SPCC Plan has been revised to reflect the replacement of the single-wall 330-gallon No. 2 heating oil tank with two new double-wall 275-gallon tanks inside the building (see enclosed photographs).

1. As described above, Downeast Energy has taken steps to correct the deficiencies specified in the four bullets, and those observed during the December 18, 2008 facility inspection. With regards to secondary containment for the large vertical tanks, the Surface Topography Plan (enclosed) suggests that the tanks are within secondary containment.

The following items will be carried out to improve the facility's oil spill prevention program:

- i) Repair and activate vertical storage tanks' overfill protection alarms by March 15, 2009 (parts have been ordered).
 - ii) Perform certified tank inspections on the active vertical storage tanks (6) starting June 1, 2009 with completion by July 1, 2009 (quotes have been requested).
2. The July 2005 SPCC Plan has been revised to reflect the recent improvements as well as to address comments and deficiencies noted on the EPA SPCC Field Inspection and Plan Checklist. A copy of the revised SPCC Plan is enclosed.
3. Not Applicable.
4. Downeast Energy owns twelve additional facilities. Additional requested information is provided in the enclosed table.
5.
 - a. \$1,000
 - b. \$60,000
 - c. \$1,500
6.
 - a. Yes, this facility is required to have MSDSs available for "hazardous chemicals".
 - b. Yes, fuels stored at the facility exceeded the 10,000 lb. minimum threshold level in the past calendar year. None of the petroleum products are considered "extremely hazardous substances".
 - c. Copies of the Tier II reports (2003 through 2007), which were submitted to the appropriate agencies, are enclosed.

The signed Statement of Certification is enclosed.

If you have any questions, feel free to contact us at 207-591-7000.

Sincerely,
ST.GERMAIN & ASSOCIATES, INC.

Scott D. Collins, P.E.
Vice President
